

- One or two way video option
- Touch screen units with optional call button
- Internal induction loop included
- Can activate external CCTV to give control room multi-angle view
- Ability to be remotely updated
- Can store information locally
- Flexible solution that can integrate easily into existing infrastructure
- Soft keys available to make on screen calls
- Available with Analogue or SIP push to call buttons
- Available with handset for calls
- Bespoke housing and screen software to suit customers' environment and to comply with DDA requirements
- Rugged, vandal and weather resistant

A new generation of GAI-Tronics Information Point has been developed to give a greater sense of security in public areas.

The Vision Help Points are ideal for public access areas such as train stations, bus stops, waterways, town centres and outside buildings. Units are vandal resistant and are built to survive in the most arduous areas.

GAI-Tronics works closely with customers to ensure that Vision delivers the right solution. The pictures shown are just two examples of GAI-Tronics' flexible approach to design.

Audio Capability

Vision has the option of an integrated audio help point which can be accessed via soft keys or a push to call button. Connection can be made via H232, SIP or analogue depending upon customer requirements.

Monitoring Capability

The units have SMART software technology which allows the console to be remotely monitored by a central control station. This reduces customer maintenance costs and enables valuable marketing analysis for the customer.
