

Acoustic Hood INNENDØRS

T800

The elegant T800 telephone hood has been designed to maximise user comfort and visual appeal in prestige locations. It is suitable for small wall or desk mounted payphones as well as standard telephone instruments. The transparent sides and top of the hood are formed from a single piece of 5mm thick tinted acrylic.

The thermoset composite moulded back panel incorporates a shelf and enhances the acrylic parts of the hood. The hood's shelf acts as a useful reading platform for directories, note pads etc. The T800 maximises the space for the user, providing a light and open environment whilst keeping the amount of wall space required to a minimum.

T1000

Strikingly different in design to existing hoods, the T1000 has considerable visual impact. The one-piece thermoset composite moulding incorporates a back panel, shelf and roof. The curved polycarbonate sides add privacy and enhance the design. Phones or payphones can be shelf mounted, or secured to the wall through the back panel.
